🎵 My slokas: record, add, practise

Sahasranama Guru · for any sloka or song you want to learn

The one thing to know: the app cuts the sound where the chanter **pauses**, and matches each pause to a **line of your words**. Clear pauses + one line per pause = it works straight away, with nothing to fix.

A · The simple way: record it yourself

best · no fixing

1 Write the words, one line per breath

Keep lines short: about half a line of the sloka, what you can chant in one breath.

> Example: 4 short lines, 4 breaths
>
> ```
> pra:thar nithya:nusandhe:yam
> parama:rttham mumukshubhihi
> slo:ka dvaye:na sankshiptham
> suvyaktham varado:bravi:th ||
> ```

2 Record it in one go, with a pause after every line

- Quiet room. Phone 20–30 cm away.
- Chant line 1 → stay silent for **1 second** (count "one") → chant line 2 → ...
- Take your breath **in the silence**, not at the start of the next line.
- Leave **2–3 seconds** of silence between two ślokas.
- Don't stop the recording between lines. One recording for the whole sloka.

> What it sounds like
>
> `pra:thar nithya:nusandhe:yam` … 1 s … `parama:rttham mumukshubhihi` … 1 s …
> `slo:ka dvaye:na sankshiptham` … 1 s … `suvyaktham varado:bravi:th ||`

3 Add it to the app

- Open 🎵 **My slokas** → **+ Add a sloka**.
- Record, or choose your audio file. Check it with ▶ (you can drag the bar).
- Paste or type the words, the same lines as step 1.
- Tap **Save**. The app finds the pauses and opens the player.

4 Practise

Choose **How to learn** on the player (see C) and tap ▶.

C · How to learn (on the player)

same for A and B

🗣 Repeat after me	🪜 Line by line	🔁 Whole
The guru's way: hear a part, then your turn to say it.	Each small piece, then the whole line, then the next line.	The whole sloka from start to end.

In ⚙ on the player: how many times (1, 3, 5 ...) and speed. Tap any line to jump to it.

B · A recording made by someone else

teacher, class, audio file

You can't add pauses to it, so make your **words follow the chanter's breaths**.

1. **Listen once and mark the breaths**
   Play it with the text in front of you. Put a mark (/) wherever the chanter stops to breathe. This is often **not** at the commas in the book.

2. **Type the words with a new line at every mark**

   Example: each line from the book, split where the chanter breathes

   ```
   sathsanga:d bhava nisspruho: gurumukha:th
   sri:sam prapadya:thmava:n
   pra:rabdham paribhujya karma sakalam
   prakshi:na karma:ntharaha
   ```

3. **Add and Save**
   Same as A, step 3.

4. **Check the parts once**
   (about 5 minutes; saved for good)
   - On the player tap **Check them ›**.
   - **▶ Hear part 1**, 2, 3 … Tap a single word to hear just that word.
   - A part starts one word early or late? Tap ✂ between two words to start a new part there. **✂ join** puts two parts together.
   - Words right, but the sound starts a little off? ◀ ▶ moves the part to the pause before or after.
   - Tap **Save**. Done.

If something is not right

The next line slips in at the end of a part	Update the app when the **New version** bar shows. Play a few lines: the app learns how late your phone stops (⚙️ shows "Phone stop delay"). If it still slips in, the pause in the recording is very short: add a line break at a longer pause, or record it again with 1-second pauses.
Words light up one word early or late	**Check them ›** → ✂ or **✂ join** (B, step 4).
Sound stops after the first repeat	Update the app (New version bar).
Too many tiny parts / too few	**Check them ›** → **− Fewer** or **+ More**.
No words, just the sound	That's fine: it still plays and repeats part by part. Words can be added later (⚙️ → Edit sloka).

In short: 1-second pause after each line when you record · one line of words per pause · Save · practise. For someone else's recording: break your lines where they breathe, then check once.
